

MANUAL ALARM. IMPORTANT!!

This apartment is equipped with an alarm system. It is entirely up to you whether you want to use it. The alarm system has 2 detectors, one hangs at the entrance and the second hangs in the living room. These are only activated when the alarm is turned on. In addition, there is also a front door sensor.

How does the system work.

There is a special key ring attached to each bunch of keys. This key ring is very important, because it can be used to turn off the alarm system. When you leave the apartment and you turn on the alarm, make sure you have it with you.

To start the alarm, the last person to leave the apartment presses button no. 4.
The alarm will then arm in 10 seconds, make sure everyone is outside and the front door is closed.

When you return, the alarm can be easily deactivated by holding the special key ring against the box at no. 5. When switched off, green lights on the box light up and light no. 1 lights up.

To only activate the door sensor, it is important that the door is not opened by someone from the outside/inside. This function of the door sensor is useful for switching on at night, for example. This can be done simply by pressing button 3. To switch off, the key fob must be held in front of No. 5. Here the same applies that the lamp No. 1 lights up and green lights come on.

NEVER USE BUTTON 6 SOS!!!!!!
